Work Experience

October 2018 - Present

JetBrains, Software Engineer (Java)

Continued working on refactoring system in RubyMine,
currently improving Ruby on Rails integration

July 2018 - August 2018

JetBrains, Software Engineering Intern (Java)

Developed new intentions for RubyMine IDEm introduced better parameter
refactoring: added parameter type choosing option, improved invocation points search,
made preview more illustrative.

Education

2016 - 2020 (Present)

Moscow Institute of Physics and Technology, Russia
Department of Innovation and High Technology
Bachelor of Applied Mathematics and Informatics

Projects

MyChief — Developed Android application with a team of 3 students: we created a tool, that helps people to find what meal they can do with products they have. I implemented structure of app, two others worked with API and design.

RestaurantBot — Created simple restaurant bot on python, in which you can look at the menu and choose meals for order, book a table, etc. I used database on sqlite for collecting and showing data for user.

Hackathons

November 2018

Photo Lab Live Challenge: Go Viral or Go Home (1st place)
Task was to suggest and develop new image filter using company API.
We developed tool for clothes segmentation.
